

Goal of yearly evaluation meetings and go-NoGo

This document describes the goal of the yearly PhD evaluation meetings, of which the Go/No-Go is the first. The goal is a feasibility risk assessment of the remaining PhD trajectory. The candidate should give answers to questions in a presentation, the Q&A, and (possibly) documents, these questions often include:

"What are opportunities and risks for the ..."

Thesis: the PhD thesis chapters?

- Is the timeline realistic? Where are the main risks? Should the timeline be changed?
- Is it sufficiently clear what the chapter-wise research questions are? What is the goal?
- Is it clear how to technically address the research questions? Can it be done?

Candidate: "Competences" of the candidate (See GNG form: Discipline, Research, Transferable)?

- How was the quality of the "evidence of competences" as provided by the candidate? (eg examples of presenting, Q&A, academic thinking, writing, etc.) ?
- Which competences are at a quality level so that they could pose a risk to the PhD? Are there sufficient opportunities to improve? (eg. courses, tools, ...)

Graduate School: Doctoral Education program?

- Is there a concrete plan for which courses?
- Is there a timeline? Are the courses mainly in the first 1-2 years? (so the candidate has time to benefit from the courses)?
- Do the courses strengthen missing competences? Could other courses help?

Supervision: The supervision team and the organization?

- Is there sufficient supervision on the content and the process (eg: frequency of meetings and topics) ?
- Is the supervision style a good fit for this candidate? Eg: Can the meetings improve?
- Is the organization a risk? (Eg: Office, working remotely). Can the organization improve?
